

DarwinPlus!

A very brief synopsis of what it's all about...

I originally set out to try to find out for my own amusement what ghosts *really* are, and why science is dead set against investigating them, using only logic as my guide. But en route, things took a number of different turns...

Now, some twenty five years later, I've written the full story of my investigation, as a mental journey which I invite you to re-live with me. It has been the most exhilarating journey of my life, taking me into areas I never expected to visit, and leading me to conclusions about problems I had previously never even thought existed.

And along the way I picked up what seems to me to be a perfectly rational explanation for the Meaning of Life, among many other things.

Odd? Yep... if considered out of context. But I hope that as you read the book you will be led along by the simple logic of it, probably to the same conclusions that I came to myself. All I ask of you is that you keep an open mind, and maintain your sense of logic above all.

Just a few of the conclusions I've come to by following an extremely simple path of schoolboy logic:

- Science, which should be an impartial *method*, has instead done the one thing it should never do, and has adopted a *dogma* which it now defends in preference to any evidence which challenges it.
- This dogma is very easily shown to be irrational. It is also supported by no evidence at all.
- Hence, by the basic rules of science, it should be immediately dropped and replaced with its sole rational alternative.
- And NO! I'm not speaking of Evolution here! If you're intrigued, then *DarwinPlus!* is a book you will enjoy.
- Eventually the original little thread of logic concerning science's dogma led to numerous other conclusions and questions in the realms of politics,

sociology, biology, physics, medicine, economics, psychology, religion, philosophy, the arts and *happiness*...

- I hope you will enjoy checking all my conclusions for rationality and logic. I've tried as hard as I can over two decades and have been unable to find a logical flaw. Several people, including editors and publishers have also been unable to find any flaw.
- So maybe... just *maybe*.... These findings, as scandalous as they will appear to some, actually hold water.
- If you'd like to try a bit of the book to see if you can get on with it, download the **FREE!!!!!! Sample of Chapters 1-7**.

If you'd like to take a chance and a leap into the void, then you can download the **Full Text of *DarwinPlus!*** for £3.95.

The full text is some 200,000 words long, and would need some 500 pages of a normal paper book. All very readable, I hope. I've certainly tried to make it so.

It's been great fun researching and writing it. I dare to think you will enjoy it too.

And, yes.. I did come up with the reason science will not tolerate ghosts, and also with a good understanding of what ghosts actually are, into the bargain. Fascinating...

The biggest thing, of course (apart from that plausible 'Meaning of Life'!) was that I found a ridiculously simple and rational way to finally reconcile science with religion.. and with the paranormal, to boot. Impossible? No, not at all. Just a little bit of commonsense logic...

It's *so* simple.... It's been staring us in the face...

Best wishes, and happy reading..
