A RECONCILIATION

Compelling stuff and a compelling read.

It reads very well and is quite gripping – I read 8 of the early chapters straight off. It needs thinking about and re and re thinking about. **Tricia, UK**

First of all, congratulations! I think you have written an important book. Totally fascinating! I'm hooked. I can't wait to find out where you are going with all this. Chapter on religion a real page turner. Please may I have some more?  
**Em, Australia**

Brilliant! I think this is an important work that could potentially help a lot of people of intelligent curiosity find explanations that make sense. It is not only brilliant from a 'technical' scientific perspective, it is wonderfully written. Witty & a very good (not to mention easy) read. It is an important book that uncovers some very hidden things & should be read (& promoted) by as many people as possible. It really is a wonderful book. **Mark, USA**

I found DarwinPlus a most enjoyable and thought-provoking read. A formidable amount of research into science, religion, philosophy and parapsychology has been made easily accessible even to one like me who is fairly ignorant of at least three of those subjects. The book is a real page-turner. **Guy Lyon Playfair, UK**

So far, excellent – thought-provoking and very interesting. It's obvious it's been thoroughly researched. It's quite difficult to put down – very tempting to read on, so I'm rationing myself to a chapter at a time! It's a very enjoyable read what with it being punctuated by your witty comments.

I'm about 1/3 of the way through, and it's fascinating! It's a massive undertaking, underpinned by much reading and thought. **Nick, UK**

Amazing!! D+ is an excellent read. And, of course, it's attention grabbing. What stands out about D+ is this; it does not force the reader to adopt what it says but it engages the reader into thinking. Too bad Materialists would say you're against Science, but any rational thinker can see that you are against Bad Science. The humour in it made it an enjoyable read. Not only enjoyable, it engaged me to think, analyse, and re-think. I now see Materialism for what it is – non-logical. You opened a whole new world for me with D+. Some of the questions I couldn't get answers to, you answered them with D+.

You can certainly write! I find the book attention-grabbing, lively and interesting. You make complex ideas easy to understand and are a powerful communicator. The personal journey style is definitely more gripping than abstract argument for a general reader and non-philosopher. The book is stimulating and brimful of mental energy. I think it could be inspirational for many people at several levels. You achieve the feat of making serious thought entertaining. It's chatty, lively, persuasive, well-informed, extremely well-read, strong and combines thought and feeling in a heady mix. I think you may be pioneering a new style in writing about thinking. I can imagine that undergraduates would certainly find this approach a lot easier to cope with than A.J. Ayer, and more enjoyable. The book is full of information – history of science, philosophy, belief, the church. It's an exploration into the unknown and belief that would appeal to any serious-minded or thinking person who has asked him/herself why we're here, what's the meaning of life. A voyage of discovery, taking the reader along as a welcome passenger. John Bunyan but not a pilgrim's progress. A man in search of truth. Using his mind to challenge bigotry and firmly held "establishment" beliefs.

I'm finding it entertaining as well as informative, and appreciating the thorough analysis and research that's gone into it. Long live free thought! **Lynda, UK**

Just finished Darwin plus and must say that my only regret is that I don't have a hard copy to pass on to my daughter when she's old enough to understand the wisdom within. Also I'd like to say thank you for taking the time to write this book and especially for making me feel like a kid again when you described the mind boggling complexity of the human cell.....WOW! **Russ, UK**

Am only five chapters in and I'm \*\*\*\*\* loving your book! Laughing my head off, posting bits on my wall and thanking Jesus h Christ Almighty that someone with a clear mind, good heart and a sense of humour can see through the Emperors New Clothes that is Materialism, Science (with a capital S), and Dawkins. Its the personal story that humanises it and allows you to be so funny (you remind me of Terry Pratchett...) and makes it very readable. I love the way you use logic to get there..

I can't believe how much information you've managed to gather together. The result is excellent. I liked being able to click on the hyperlinks and look at further information on the internet. The whole idea of D+ seems entirely logical to me. The whole concept of D+ simplifies many things and provides a lot more answers than materialism. I see the book as a resource that has started me on my own personal journey of discovery. The next thing I'm going to do is read it again, before branching off into some of the books in the bibliography. The overwhelming feeling I had throughout reading the book was that it just 'felt' right. The historical aspects were very insightful and gave me a better understanding of how/why science and religion are where they are. Many thanks for writing the book. I'm going to start reading it again tonight. **Kevin, UK.**

Materialism is easily shown to be riddled with paradox. It is thus untenable as a philosophy, especially for science. But what might replace it? Not theological fog or 'medieval superstition', but a genuine 'third way', based upon impartial reasoning, which easily integrates the essential philosophy of 'real religion' with the empirical methodology of 'real science'.

Too good to be true? Read 'D+' for yourself and see what you think. Logic.. just logic, and an open mind...
